ASTRA LABS

SPONSORSHIP PACKAGE · 2026–27

HELP US FLY THE 2027 ROCKET.

Student rocketry at Seneca Polytechnic. Team 06 in the Launch Canada Challenge.

alsp.ca · astralabsengineering@gmail.com

WHO WE ARE

WE BUILD ROCKETS AT SENECA.

Astra Labs is a Seneca Student Federation club competing as Team 06 in the Launch Canada Challenge. Subteams own the airframe, avionics and recovery, payload, ground software and operations. No rocketry experience needed to join, so most of us learned it here.

LAUNCH CANADA 2026 · TIMMINS, AUG 15–22

MADE IT TO THE RANGE. THEN THE WEATHER HIT.

Test-fitting airframe sections

Walking mentors through the build

Pioneer at our tent on the range

Our launch was called off for weather. So we’re refitting Pioneer and starting a second rocket for 2027.

THE VEHICLE

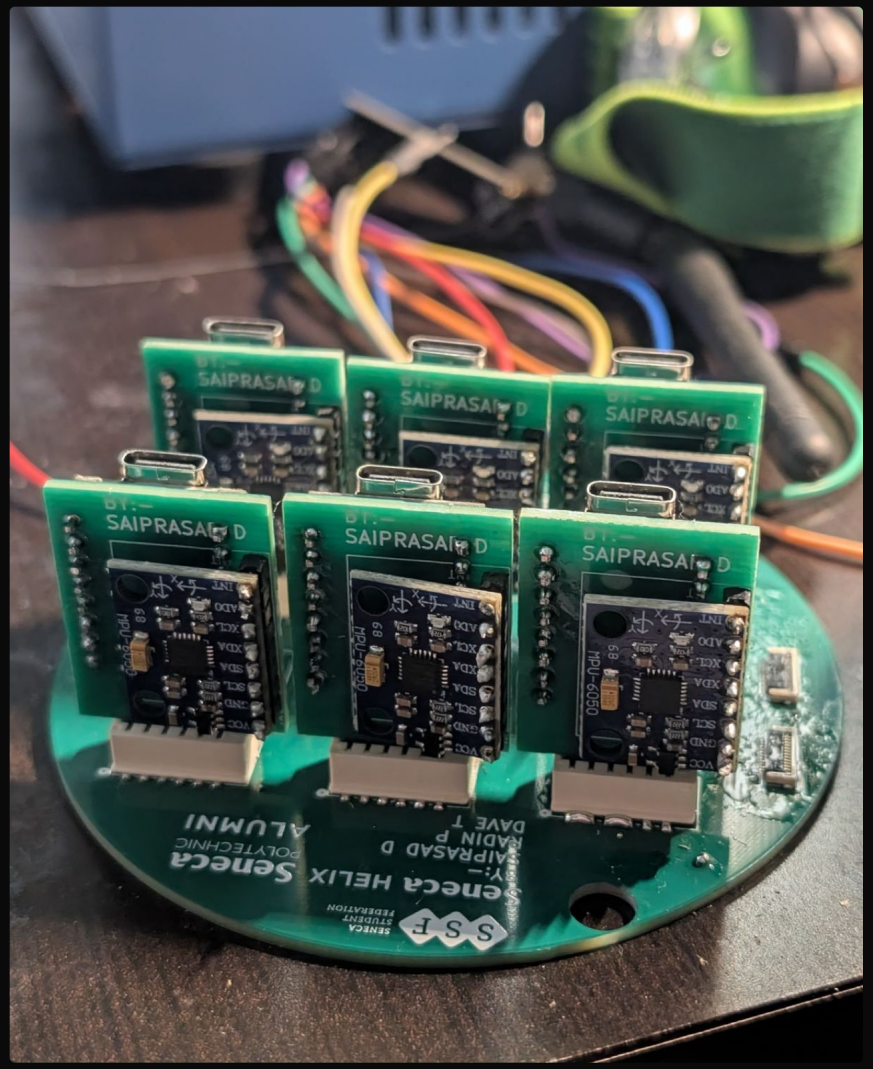

MEET PIONEER.

Our first high-power rocket. The airframe is a fibreglass kit and recovery runs on off-the-shelf altimeters. We assembled, wired and integrated all of it. The payload we designed from scratch.

Airframe	4" G12 fibreglass, G10 fins
Motor	Cesaroni L1355-P
Size	2.5 m tall, 12.6 kg loaded
Recovery	Dual deploy, two EasyMini stacks
Tracking	Two Featherweight GPS units
Flights so far	Zero. Working on it.

2.8 KM

Target apogee. Roughly five CN Towers stacked.

THE PAYLOAD

24 SENSORS, ONE QUESTION.

Fly 24 identical motion sensors on one rocket: how much do they disagree? Each node is an ESP32-C6 with an MPU-6050 IMU, talking over a CAN bus to a hub that radios data down on 433 MHz. A tiny rideshare mission.

Your logo can fly on the hardware.

We design these boards in KiCad. Our builders put their names on the silkscreen, and partner marks can go there too.

THE 2026–27 SEASON

TWO ROCKETS, ONE SEASON.

Refit Pioneer and fly it. Design a new 4-inch rocket on 75 mm Cesaroni hardware to carry Hivemind, our next payload: 30 student-built picosats that learn together in flight, at Launch Canada 2027.

NOV 3, 2026

Moonshot 5

Invited to show Pioneer and our picosat.

NOV 30, 2026

Pioneer flight-ready

New G10 bulkhead in. First design review for the 2027 rocket.

JAN 2027

SEDS Canada, Montreal

Invited to represent Astra Labs at the conference.

JAN 31, 2027

Preliminary design review

Payload node count locked. Final review follows.

AUG 2027

Launch Canada 2027

Competition week. Dates to be confirmed.

WHERE YOUR SUPPORT GOES

IT BUYS HARDWARE, NOT JUST MARKETING.

Vehicle and payload

Airframe materials, recovery hardware, avionics boards and payload kits.

Fabrication and test

Shop tooling, measurement gear and ground-test fixtures.

Competition

Launch Canada registration, range operations and student travel.

Education and outreach

Workshops, club events and recruiting, so anyone at Seneca can join.

WHAT PARTNERS GET BACK

MORE THAN A LOGO ON A PAGE.

Visibility

On our website, social posts, event materials, and the rocket itself where competition rules allow.

Talent pipeline

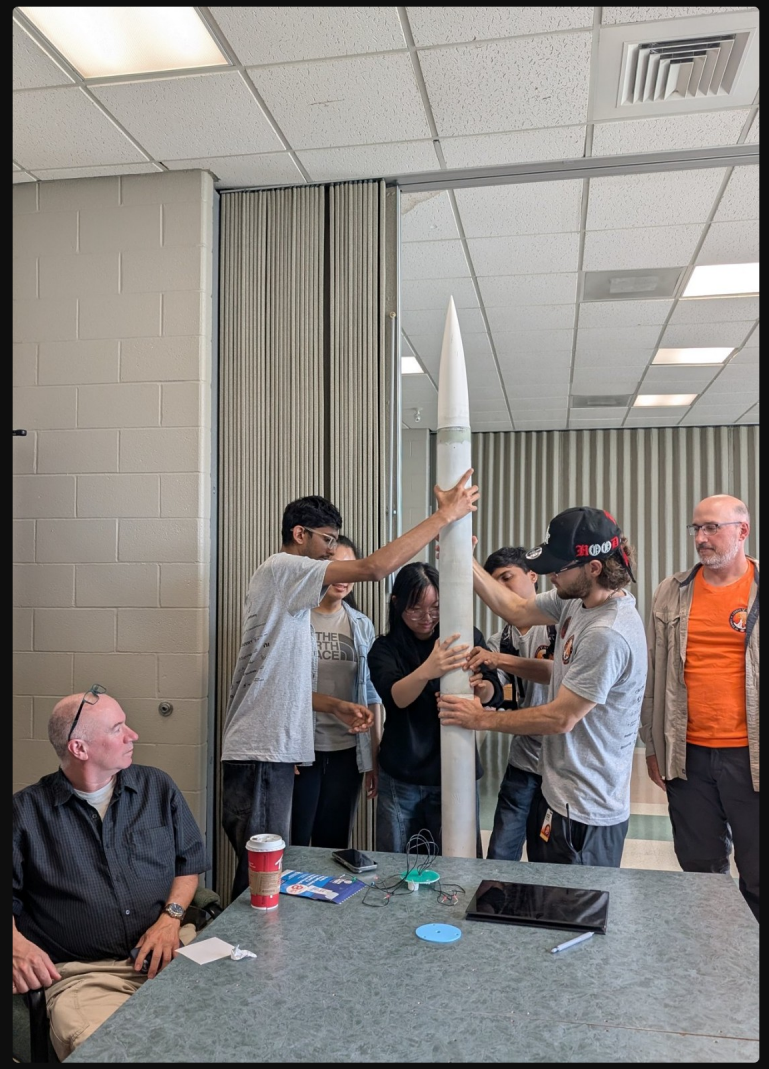

Meet students doing CAD, KiCad, embedded firmware, fabrication and technical writing.

Proof of progress

Build logs, photos and milestone updates through the season.

Lasting impact

Tools and know-how that stay at Seneca for the next crew.

SPONSORSHIP TIERS · CAD

PICK A LEVEL THAT FITS.

BRONZE

$500+

- Logo on our website
- Small rocket logo (2"×2")
- Instagram story shoutout
- Credit on LinkedIn and Instagram

SILVER

$1,000+

- Logo on team shirts
- Medium rocket logo (4"×4")
- Access to our résumé book
- Invite to campus launch demos

GOLD

$2,500+

- Logo on the payload circuit boards
- Large rocket logo (6"×6")
- Dedicated social post
- Info session or workshop
- Logo bookmark at the end of our videos

HONOUR

$5,000+

- Largest rocket logo
- Model rocket replica
- Recruiting event or team presentation
- Invite to our design reviews

Each tier includes everything in the tiers before it, plus regular project updates and a certificate of appreciation. Contributions can be monetary, in-kind or services.

SPONSOR A PICOSAT

FUND ONE STUDENT'S PICOSAT.

$200

PER STUDENT · CAD

What you get back

- Your name on the picosat's circuit board
- A photo of the student with their finished picosat
- The flight data from that picosat

01 **A student joins the workshop**

A hands-on picosat build workshop at Seneca HELIX. Any program, no experience needed.

02 **They build a flight node**

Solder, program and test their own ESP32 picosat with its own sensors.

03 **It flies**

Their picosat joins Hivemind, the payload on our 2027 rocket, and sends its data back to the ground.

Covers the student's flight hardware and workshop materials. Great for alumni, families and small businesses.

THANK YOU

PIONEER EXISTS BECAUSE OF THESE PEOPLE.
