To Whom It May Concern,

On behalf of Students for the Exploration and Development of Space Canada (SEDS-Canada), we are pleased to officially confirm that **Astra Labs has been selected to participate in the 2026–2027 Canadian Stratospheric Balloon Experiment Design Challenge (CAN-SBX)**.

SEDS-Canada is a student-led, national organization dedicated to advancing student involvement in the space sector through educational initiatives, technical projects, and hands-on learning opportunities.

CAN-SBX is a collaborative program organized by SEDS-Canada in partnership with the Canadian Space Agency (CSA). The program provides selected student teams with the opportunity to design, develop, and test scientific payloads for flight aboard a stratospheric balloon, gaining practical engineering and project management experience while working with CSA professionals.

As a selected team, Astra Labs will develop its proposed experiment through technical design reviews, payload development, and testing in preparation for the launch campaign. We are pleased to support the team as they pursue funding and sponsorship opportunities to bring their project to fruition.

Should you require further information regarding Astra Labs' participation or the CAN-SBX program, please feel free to contact cansbx@seds.ca.

Sincerely,

SEDS-Canada
